

**ABSTRACT OF THE DISCLOSURE**

5 A cart for transporting a bag of equipment such as sports equipment has at least a first and second bracket made of durable and light weight tubing material in which the second bracket is telescoped into the first bracket. Th first bracket has tubular legs spaced by a platform on which one end of the bag rests. Wheels are mounted at the bottom of the bracket for rolling the cart. The brackets are formed of tubular legs and the bag, resting on the platform, is attached to the legs when the legs are in an extended configuration.
